

ABSTRACT

The present invention relates to an animal multi-component foodstuff which enables the animal to optimise the macronutrient content of its diet. The invention also relates to food components for use in such a foodstuff, and to use of the multi-component foodstuff in animal health benefits. The present invention relates to an animal multi-component foodstuff comprising two or more compartmentalised food compositions, of which at least two compositions differ in their content of at least two of fat, protein or carbohydrate.
